

# Year 4

## Animals including humans

### We are learning about:

- **how our body processes food** (describe the simple functions of the main parts of the digestive system in humans)
- **different types of teeth** (identify the different types of teeth in humans and their simple functions)

The third curriculum bullet point from the Kent scheme has been removed from animals including humans, to add to next topic – Living things and their habitats - food chains, animal diet etc.

### We are learning to:

- **select and plan an appropriate approach to answer a question** (to be able to identify the correct type of enquiry to answer a question, to be able to set up a comparative test)
- **use evidence to form a conclusion** (to be able to use evidence to support findings)
- **report what I have found out** (to be able to record findings using labelled diagrams and written explanations)
